|---|--|
| January 4 1330h | C.P. was found in her suite, unable to get up, by staff at her residence. She was transported by EMS to |
| Dr. Jaclyn Meyer, GIM | RUH under my care. She has had many brief hospital stays over the last year r/t chronic UTIs. C.P.'s GP |
| | Dr. Jams, has stated that C.P. has missed or rescheduled many appointments over the last year. At her |
| | last appointment with Dr. James, C.P. presented with confusion which was later determined to be caused |
| | by a UTI and she was treated for the same. Due to concern that C.P. is not functioning well on her own at |
| | home, I spoke with her nephew, Daryl, who stated C.P. is not managing her medications well. Daryl stated |
| | he is concerned about his aunts well-being and has mentioned that she has wandered away from her |
| | complex (located downtown) and become lost a few times. He has also stated that he is not always able |
| | to assist C.P. to her appointments as he resides in a different city and works full-time. I have informed C.P. |
| | that I have consulted homecare and that a community nurse will come to her home to see her and will |
| | conduct a detailed assessment including reviewing her medication regimen, and determining whether she |
| | requires a further level of care than what she is currently receiving. Any findings will be faxed to myself |
| | along with her G.P., Dr. James. |
| | J.Meyer |
| January 6 1100h | C.P. accepted by homecare, discharged home this morning. Homecare to follow-up this afternoon. |
| Dr. Jaclyn Meyer, GIM | J.Meyer |
| January 6 1330h | Received request to review patient's medications following hospital discharge. |
| Pharmacist Progress Note | Noted SCr (Jan 4) to be 120 umol/L, calculated patient's CrCl to be 33 ml/min. Most recent BP 139/89 |
| | HR 92 bpm. Pharmacist Suggests: |
| | - stop naproxen, as it may worsen kidney function and increase blood pressure. |
| | - consider starting regularly scheduled acetaminophen for pain instead |
| | - Stop daily aspirin (no history of cardiovascular events, and may increase bleed risk unnecessarily) |
